TREAT IMPROVEMENT IN DENTIS-

The attention of the public is called to a great discovery in Dentistry.

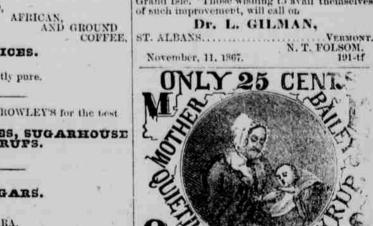

discovery in Dentisiry.

THE GREATEST ADVANCE STEP EVER MADE IN THE ART.

The main difficulty in wearing artificial teeth is, they do not hold in their place firmly enough, and add to this the annovance of food getting greater the plate while eating. I have discovered a method of so constructing the plate on which the teeth are set that they will not start or drop while eating or speaking, neither will any particles of food get under the plate, no matter what the condition of the month is, which is not true of any method hithertoused.

I have secured Letters Patent for the United States, England and France.

The improvement is not in material, but in the construction, whichs course the atmospheric pressure on the entire plate.
